DETAILED ACTION

This office action is in response to applicant's amendment filed April 16, 2007.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 3, 4, 6, 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mertol (U.S. 6,008,536) in combination with Chen et al. (U.S. 6, 403, 882) and Katchmar (U.S. 5,661,902).

Mertol (Fig. 1, 2) discloses a semiconductor assembly comprising: a substrate (14) having a plurality of circuits (i.e. 24 in contact with balls) on a portion of a surface thereof; a semiconductor die (12) having a plurality of bond pads located on an active surface thereof (i.e. portion in contact with balls) and having a back side surface; a plurality of solder balls (20) connecting at least a portion of the plurality of bond pads of the semiconductor die to at least a portion of the plurality of circuits of the substrate; one of a glob top material and low viscosity polymeric (e.g. "epoxy", 34) filling any space between the substrate and the semiconductor die; an thermal conductive adhesive (36) contacting at least a portion of the back side surface of the semiconductor die; and a heat sink cap (16) having portion thereof contacting a portion of the substrate covering the interface, the semiconductor die, the plurality of solder balls, and a portion of the

Art Unit: 2813

substrate free of gaps therewith (e.g. cap attached by adhesive, 40), the heat sink cap having the edge portion (e.g., bottom of cap) substantially contacting the substrate (Fig. 1) and the heat sink contacting at least a portion the interface.

Mertol does not appear to explicitly show that its thermal adhesive is a compliant under light pressure, adhesive, gel elastomer, cross linked silicone, filled with thermally conductive material having wetting properties.

However, Chen utilizes a thermal interface that is an adhesive silicone that is compliant under light pressure², filled with thermally conductive material having wetting properties (silicone filled with silver; Col. 3, Lines 15-24).

It would have been obvious to one of ordinary skill at the time the invention was made to form the adhesive of Mertol³ with the thermal interface of Chen in order to provide thermal conductivity as taught by Chen (Col. 3, Lines 22-24).

Neither Mertol nor Chen appears to explicitly disclose that its silicone is a gel/elastomer formed by cross-linking its silicone.

However, Katchmar (Col. 5, Lines 22-25) teaches a gel/elasomer silicone and therefore cross-linked silicone.

It would have been obvious to one of ordinary skill in the art to cross-link the modified silicone interface of Mertol in order to provide an interface with a low modulus as taught by Chen (Col. 5, Lines 22-25) and as required by Chen (Col. 2, Lines 49-51)⁴.

¹ For examination purposes, understood to mean free of any empty gaps between the cap and substrate.
² Light pressure is subjective.

³ Mertol only provides some examples of what the interface material may be.

Art Unit: 2813

Claims 2, 5, 7 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mertol (U.S. 6,008,536), Chen et al. (U.S. 6, 403, 882) and Katchmar (U.S. 5,661,902) as applied to claims 1, 4, 6 and 9 and further in combination with Chia et al. (U.S. 6,225,695).

Neither Mertol, Chen nor Katchmar appear to show the heat-dissipating member with fins.

Chia teaches the use of fins (Fig 1A).

It would have been obvious to one of ordinary skill in the art to incorporate fins on the modified heat-dissipating member of Mertol in order to order to provide greater surface area for cooling as taught by Chia (Col. 2, Lines 53-55).

Response to Arguments

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

⁴ Because the disclosure makes obvious the same material as claimed, it functions and has same

Application/Control Number: 10/792,244 Page 5

Art Unit: 2813

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James M. Mitchell whose telephone number is (571) 272-1931. The examiner can normally be reached on M-F 8:00-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carl Whitehead Jr. can be reached on (571) 272-1702. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
